NEWS RELEASE

Scalable Building Strategy Presented at the Building Controls Show

October 2014 — Contemporary Controls' UK sales office is presenting the Scalable Building Strategy at stand number 39 at the Building Controls Show 2014. The Building Controls Show 2014 is the only exhibition in the UK dedicated to the building controls industry. For those not attending the event you can learn about our Scalable Building Strategy here.

The objective of the Scalable Building Strategy is to provide customers with an integrated building automation solution guided by Niagara AX, which in turn controls both Tridium building controllers and our BACnet - BASautomation network connectivity products — with the primary objective to provide a complete, integrated, cost-effective building automation solution for small to large sized buildings.

The Scalable Building Strategy utilizes NiagaraAX hardware and software. "The Niagara AX Supervisor network server provides the centralised data logging, alarming, scheduling and real-time displays to web browser clients. The Tridium JACE building controllers provide local supervision over Contemporary Controls BASautomation BACnet routers, gateways and Powered by Sedona Framework™ field controllers. We are also authorized Tridium distributors," mentions Paul French, EMEA Sales Manager.

Contemporary Controls Ltd (CCL) located in Coventry, UK and Contemporary Controls GmbH (CCG) located in Leipzig, Germany are both Authorized Tridium Distributors for Europe. Both offices can arrange for Niagara certified training and provide technical support in either the English or the German language.

For more information contact our Contemporary Controls Ltd UK location at + 44 (0) 24 7641 3786 or Contemporary Controls GMBH location at + 49 (0) 24 7641 3786.
